Solar cells are typically about 4.5" wide by 4.5" tall. Residential solar panels have 60 cells and so are about 3 feet wide by 5 feet tall. Any bigger than this and it would be difficult to install them on residential roofs, where space can be an issue. Commercial solar panels have 72 cells, but they are much too big for residential roofs.

The parameter sensitivity study reveals that there are two critical interactions within a PV module: (1) between ribbon and solar cell and (2) between front/back cover and interconnected solar cells.
