Series vs. Parallel Connections: A Comparison. Series Connections:. How It Works: In a series connection, solar panels are connected end-to-end, with the positive terminal of one panel connected to the negative terminal of the next.; Voltage and Current:. Voltage: The voltages of each panel add up, while the current remains the same as that of a single panel.

Very new to solar. Just ordered an Exoflow Delta 2 Max and 3 solar panels. I bought a 160W panel and the bundle came with 2 free 110W panels. My plan was to just connect them all together, but I'm not sure now. I didn't know the difference between series and parallel connections until I just saw some recommended videos about it on .
