Historically, the advice for finding the best angle for solar panels has been to set your tilt angle equal to your latitude. Using latitude is a good rule of thumb. But we can also get slightly better solar panel angle estimates using free online tools. Let's dive right in. Calculate the Best Solar Panel Angle for Your Location. But first:

Solar panels do work on a flat roof, but the panels need to be at a specific angle to generate the most electricity - around 35 degrees is perfect in the UK. 35 degrees is rarely achievable on a flat roof because of increased exposure to high winds (and because solar panels on flat roofs can't protrude more than 60cm above its surface), so ...

Yes, you can install solar panels flat, but they will experience a degree of energy loss without the slightest inclination towards the sunlight. Although it certainly is advantageous to have a roof that is inclined in the sun's direction, a flat surface will also do. ... The best position for solar panels is an angle tilted toward or ...

The optimal angle for solar panels in North America is between 20 and 45 degrees toward true south, usually depending on your latitude.
