What is a Single Line/Schematic Diagram ? A Single Line Diagram (SLD) (also know as Schematic Diagrams) is a simplified representation of the components in an electrical system and denotes how the components are laid out. It can also give key information on installation details including voltage and current of stringing in the system.

Net metering is an arrangement between solar energy system owners and utilities in which the system owners are compensated for any solar power generation that is exported to the electricity grid. The name derives from the 1990s, when the electric meter simply ran backwards when power was being exported, but it is rarely that simple today.

A photovoltaic system, also called a PV system or solar power system, is an electric power system designed to supply usable solar power by means of photovoltaics consists of an arrangement of several components, including solar panels to absorb and convert sunlight into electricity, a solar inverter to convert the output from direct to ...

Most of us understand what solar power is and how it generally works. Solar panels convert sunlight into electricity, which is then transmitted to a battery or directly to a load (an appliance, machine etc.). If you are planning to install a solar system or buy a solar generator, you must master the basics of electricity and power generation.
