9. When a self-priming pump shuts down, the discharge pipe must be designed such that enough liquid flows back into the pump to fill the self-priming chamber. Therefore do not put a 90 degree elbow on the pump discharge. Always allow for plenty of pipe before the discharge check valve and isolation valve.

they are ideal for solar water pumping systems. All rotors in the Mono solar range are 316 stainless steel. They are self cleaning which makes them ideal for iron oxide environments. Solar Panels The most visible part of any solar pumping system are the solar panels. As the power behind any system, the correct choice of panels is a must.

Horizontal self priming volute casing pumps, single stage with semi open impeller, in back pull out design. Long coupled on baseplate, suction lift up to 7 metres. Suitable pump for pumping muddy water, sewage, polluted liquids ...
