Hydrogen can be stored physically as either a gas or a liquid. Storage of hydrogen as a gas typically requires high-pressure tanks (350-700 bar [5,000-10,000 psi] tank pressure). Storage of hydrogen as a liquid requires cryogenic temperatures because the boiling point of hydrogen at one atmosphere pressure is -252.8°C.

35% more energy can be stored in 20-feet container, up from the traditional design of 3727kWh to 5016kWh.

Higher BESS capacity will allow for lower auxiliary power consumption and hence improve the overall round ...
