

The battery indicator light is always on

I always get 54.6V on a full charge. I think you should too. 54.6 makes sense since it's 13×4.2 . 13 is the number of cells in series in the pack and 4.2 is the voltage each cell gets charged to. Regarding the LED indicator light, I have a cordless drill battery with 3 indicator lights to show voltage status but one of the lights failed.

The fact the turn signal indicator light is always "on" with ignition and not blinking when TS are on indicates it's not in the same loop as the turn signals. Here is a wire diagram which should apply to your bike. The turn signal indicator lamp in the dash shares a ground with the high beam indicator and speedo/tach illuminators.
