OverviewDesign origin and terminologyHistoryWorking principleVoltage and state of chargeApplying pressure on lithium polymer cellsApplicationsSafetyLithium polymer cells have evolved from lithium-ion and lithium-metal batteries. The primary difference is that instead of using a liquid lithium-salt electrolyte (such as lithium hexafluorophosphate, LiPF6) held in an organic solvent (such as EC/DMC/DEC), the battery uses a solid polymer electrolyte (SPE) such as polyethylene glycol (PEG), polyacrylonitrile (PAN), poly(methyl methacrylate) (PMMA) or poly(vinylidene fluoride) (PVdF).
