Optimal Voltage Levels for a Fully Charged 12V Battery. If you're unsure about the charge level or the reliability of a 12V battery, you might want to manually measure its charge level order to do this, you'll want to make sure that the battery is "at rest" (with nothing actively charging it), and then use a tool called a multimeter to measure the charge across the two ...

An AGM battery has a different voltage range than a 2V lead-acid cell. According to the provided search results, the voltage range for a flooded lead-acid battery should be between 11.95V and 12.7V.
