You're looking for a mid-priced portable power station: EcoFlow's Delta 2 Max is just under \$2000 base, with an additional \$500 - 600 for the solar panels, and another \$1400 for an extra battery.

The capacity of energy that a power station (portable power station) can store for usage on devices, appliances, etc is measured in Watt Hours. How does the calculator calculate watt hours (Wh)? Enter the watts (W) of the appliance(s) and the average number of hours of use to calculate the Wh (watt hours).

It would take about four to five hours to reach total electricity storage capacity when charging using a USB-C input. The USB-C input/output is 5/9/12/15/20V, 3A, and 60W Max. Since the EcoFlow RIVER 2's capacity is 256Wh, you'd divide that by the max watts of the USB-C input/output:  $256\text{Wh} / 60\text{W} = 4.3 \text{ hrs}$ .
