Exploring the impact of higher Ah on power output. A higher Ah battery has a significant impact on power output. Batteries with higher amp hours deliver more current and power in watts, resulting in increased performance. With more cells inside, these larger battery packs provide longer runtime. Additionally, a higher Ah rating means the battery can discharge ...

current--reduces the battery life . The shelf life of a VRLA battery is the length of time a battery can stand, open circuited, before it can no longer be recovered to full capacity with a single charge . Shelf life is determined by the length of time it takes the battery to lose 40%-50% of its initial capacity due to self-discharge .
