Batteries are becoming increasingly important toward achieving carbon neutrality. We explain here about Battery Management Systems, which are essential to using batteries safely while maintaining them in good condition over a long time. We also look at the electronic components used in them and Murata's technical articles.

China's current leading role in battery production, however, comes at the cost of high levels of overcapacity. In 2023, excluding portable electronics, China used less than 40% of its maximum cell output, and cathode and anode active material installed manufacturing capacity was almost 4 and 9 times greater than global EV cell demand in 2023.
