OverviewHistoryDesignFormatsUsesPerformanceLifespanSafetyA lithium-ion or Li-ion battery is a type of rechargeable battery that uses the reversible intercalation of Li ions into electronically conducting solids to store energy. In comparison with other commercial rechargeable batteries, Li-ion batteries are characterized by higher specific energy, higher energy density, higher energy efficiency, a longer cycle life, and a longer calendar life. Also note...

Although silicon-based materials will play a major part in upcoming battery developments, it remains a question of how much battery life and safety outweigh the increased energy density. The answer varies from industry to industry, and silicon is likely to play a greater role in batteries where life and protection are less important.
