What types of new energy sources are there for household energy storage

Identify a renewable energy source that suits your needs: Research the renewable energy sources available in your area and assess their suitability for your home. An area with little wind is unlikely to benefit from a wind turbine, and a roof blocked by shade won't capture much sun.

In addition, electricity storage is critical to avoid congestion in the power grid since most of the renewable production originates in Southern Italy but is consumed mostly in the north. Therefore, PNIEC also provides for the installation of new energy storage infrastructure with the aim of reaching 22.5 GW of installed storage capacity by 2030.

Innovative energy storage advances, including new types of energy storage systems and recent developments, are covered throughout. This paper cites many articles on energy storage, selected based on factors such as level of currency, relevance and importance (as reflected by number of citations and other considerations).
