An AGM or "Absorbed Glass Mat" battery is another type of flooded lead acid battery. An AGM battery has the same lead-acid chemistry, but the electrolyte is "absorbed" and contained within a matting inside the battery. This means that, like a gel battery, an AGM battery can be placed in just about any orientation.

Which lead-acid battery is the power cord

Lead-Acid Battery Composition. A lead-acid battery is made up of several components that work together to produce electrical energy. These components include: Positive and Negative Plates. The positive and negative plates are made of lead and lead dioxide, respectively. They are immersed in an electrolyte solution made of sulfuric acid and water.

This sealed lead acid battery charger cord is 6 feet long with a 2.1 mm barrel center plug. Rate this description Did you find the information on this page useful?
