Seasonal Adjustments: Adjust panel angles seasonally--tilt more vertically in winter and flatter in summer--for optimal ...

Solar panels on a shallow roof capture more sunlight during the summer season, whereas, solar panels on a steep roof will produce more power during the winter. While you can use solar panel trackers to keep them at the optimum angle at all times, the costs and complications involved aren't worth it in most cases.

The solar zenith angle is the zenith angle of the sun, i.e., the angle between the sun's rays and the vertical direction is the complement to the solar altitude or solar elevation, which is the altitude angle or elevation angle between the sun's rays and a horizontal plane. [1] [2] At solar noon, the zenith angle is at a minimum and is equal to latitude minus solar declination angle.
